Technical Services Group — TSG

The Technical Services Group at Triplex, Inc. offers a variety of services which will ensure optimum performance in your bulk liquid transfer operations.

Triplex, Inc. has a complete repair facility in Houston, Texas. Our technicians and consultants have over 50 years of combined experience. We offer swivel joint, tank truck and rail car loading arm refurbishment, both at the customers site and our distributor site.

Triplex, Inc. can customize a Preventative Maintenance Program around our customer's specific needs and requirements. The (PM) Preventive Maintenance Program is designed to minimize downtime and extend the life of your equipment. The program goal is to ensure safe and optimal operation of your swivel joints, loading and/or unloading arms. The benefit gained by our PM Program can help you be proactive towards maintenance instead of reactive to emergencies.

Following initial equipment inspection, an Inspection and Condition Report is issued that will detail the condition and/or recommendations for your equipment. Once the scope of work is agreed upon, our team of experienced technicians will replace and/or refurbish all equipment either at your site or at our site in a timely manner.
